

MAY 2023 NEWSLETTER

Welcome to the May issue of the Advance Anti-Slip Surfaces newsletter.

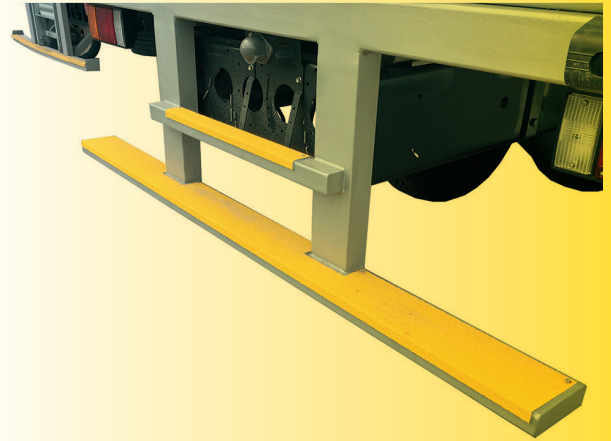

The safe surfaces industry is one of the most important sectors in the safety market for protecting workers, visitors, contractors and all pedestrians from incident and injury due to a slip, trip, stumble, tumble, or a fall.

Non-slip products come in a wide variety of shapes, sizes, colours, coarseness grades and are required to achieve a multitude of different results such as, safety, visibility, aesthetics, compliance requirements and the covering of an aging or worn surface.

Standard anti slip products are installed in relatively familiar pedestrian locations such as on stairs, steps, stairwells, landings, platforms, walkways, ramps, and ladders rungs. However, there are many more opportunities to solve potential slip problems and prevent injuries in other applications.

The places where our class 1, ready to install, metal backed antislip products can be located is unlimited. We cut, shape, and bend the metal foundation to the desired configuration and then use a proprietary process of laminated textile composition, carborundum grit and superior resin coating to form a robust and long lasting non slip surface.

You've probably seen our product during your daily routine and not really noticed its placement on transport and logistics vehicles, trains and station platforms, emergency services vehicles, construction and mining

machinery, food production equipment, weighbridges, skateboards, infrastructure projects such as bridges, tunnels, and dams, as well as various areas in civil aviation, defence, and the agriculture sector.

Advance Anti-Slip nonslip products are trusted and respected globally by maintenance and operation managers, WH&S supervisors and purchasing managers, to name a few, who are all responsible for the safety of their workers, contractors, and visitors. Our cost-effective non-slip products keeps everyone safe, reduces stress and contributes to lowering a company's operating costs.

All of the anti-slip products we make are designed using very high-quality components that are both reliable and durable. We consistently prove our commitment to all industry sectors by only using the highest quality materials in all the antislip products that we make. We know that you will be glad you chose Advance Anti-Slip Surfaces for your nonslip solutions.

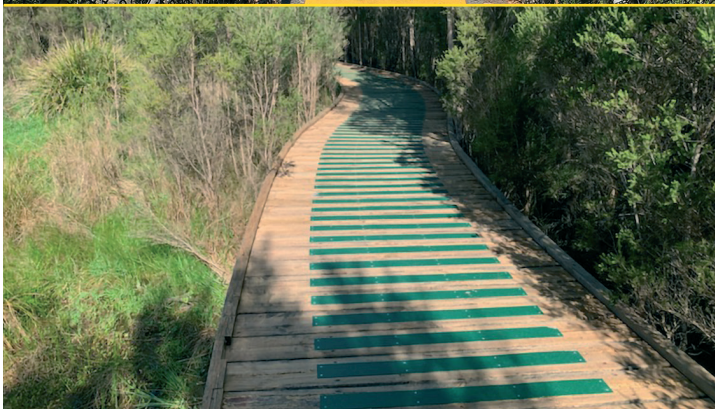

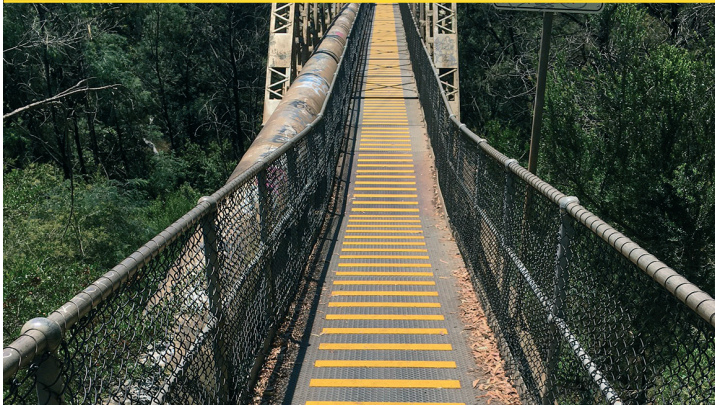

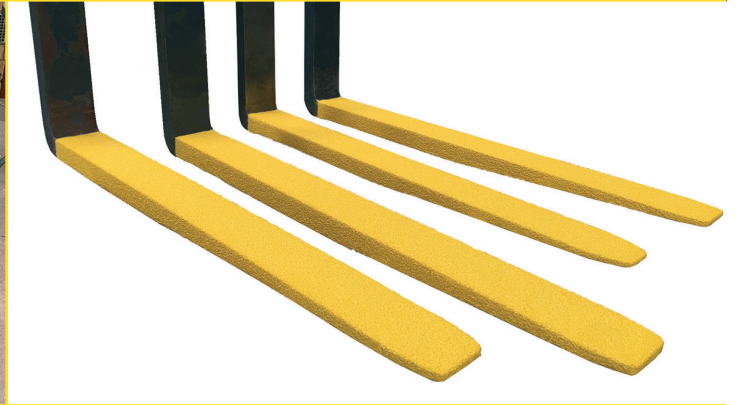

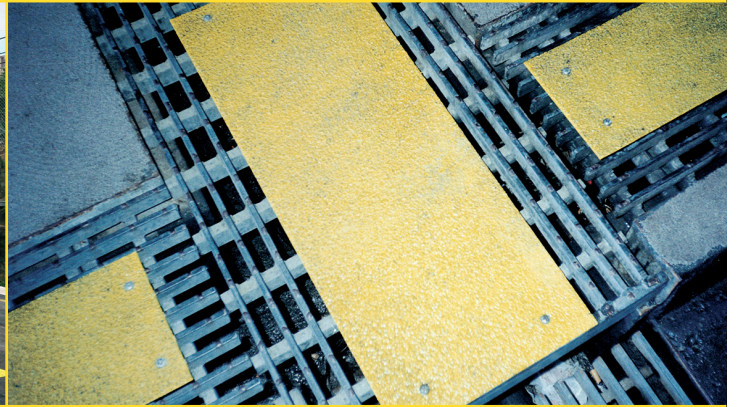

Let's prevent all slip, trip and fall injuries! Take care and stay safe over the coming months.

Pictures of some of the many antislip elements we have supplied can be found on our website Gallery page.
