

COMMERCIAL STAIR TREAD NOSINGS

Advance Anti-Slip extruded aluminium (ally) stair treads with the coloured carborundum and hardened resin insert are an extremely durable and robust combination designed to provide secure non-slip footing on internal or external stairs in a commercial or residential environment.

Ally Stair Treads can be surface mount installed on most substrates such as concrete, ceramic, masonry, timber and some simple metal steps.

Extruded 6061 T6 aluminium stair treads and antislip insert combinations provide options for seamless integration of the treads with the surrounding finishes while allowing any screw fixings to be concealed.

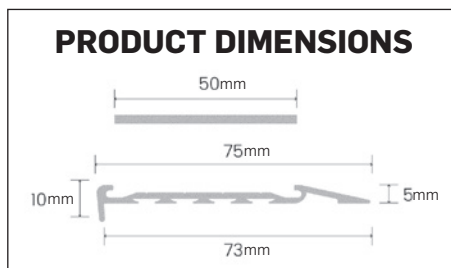

PRODUCT FEATURES

- Highlights the leading edge of the step
- Australian Standard 4586: 2013 compliant – P5
- Provides secure footing on wet & oily surfaces
- Available in many colour options
- Robust, durable, reliable
